benacek@tu-berlin.de, jbenacek@physics.muni.cz

Solar flares and their emissions

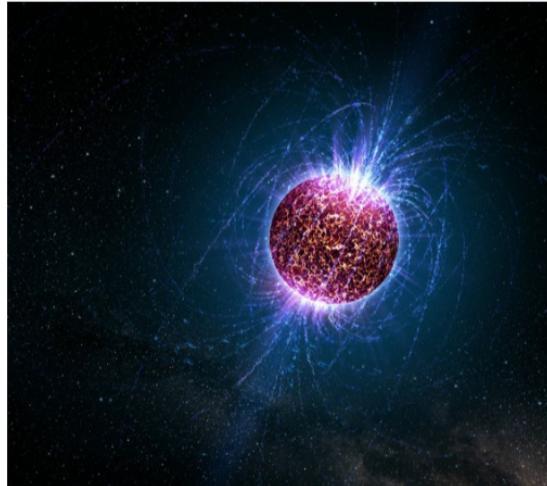

Neutron stars provide insights into a broad range of various astrophysical phenomena

Pulsars

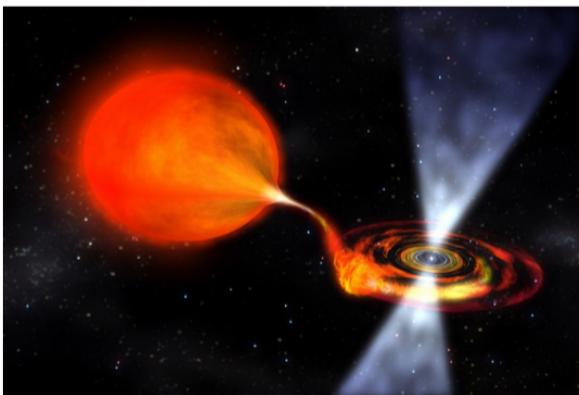

Magnetars

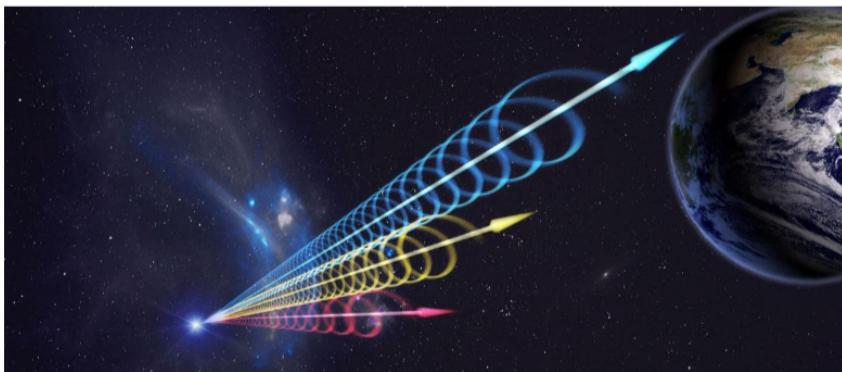

Gravitational waves

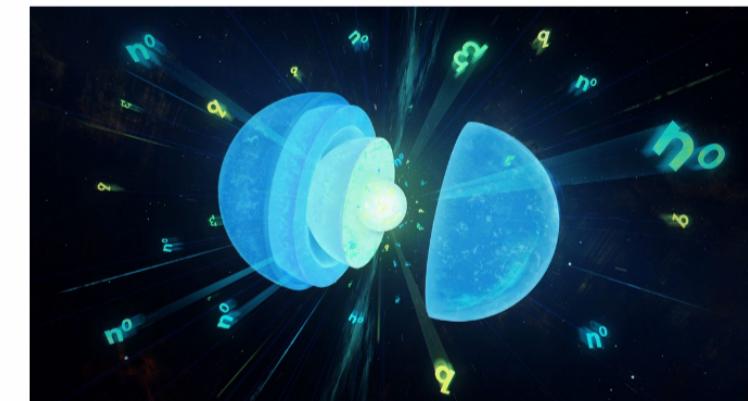

Millisecond pulsars

Fast radio bursts

Extreme physical environments

Simulations on supercomputers

Examples of topics

- Study of radio, UV, and X-ray emission during solar flare
- Systematic analyzes of solar radio burst archive in Ondřejov
- Interpretation of pulsar radio and X-ray emission
- Study of particle acceleration in (relativistic) magnetic reconnection or in (relativistic) shock region
- Development of code for radio or X-ray emission or transfer
- Implementation of electron-positron creation into our code Tristan
