

Lecture 2a - Structure of crystals - continued

Solid State Physics 460- Lecture 2a Structure of Crystals (Kittel Ch. 1)

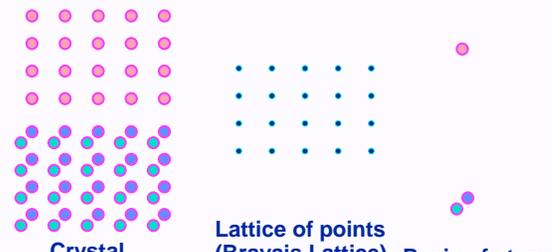

See many great sites like "Bob's rock shop" with pictures and crystallography info: <http://www.rockhounds.com/rockshop/xtal/index.html>

Physics 460 F 2006 Lect 2a 1

From Last Time **Crystals**

- A crystal is a repeated array of atoms
- Crystal \leftrightarrow Lattice + Basis

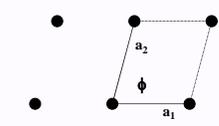

Crystal (Bravais Lattice) Basis of atoms

- Crystals can be classified into a small number of types – See text for more details

Physics 460 F 2006 Lect 2a 2

From Last Time **Two Dimensional Crystals**

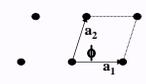

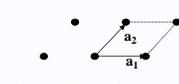

Lattice Basis

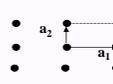

- Infinite number of possible lattices and crystals
- Finite number of possible lattice types and crystal types

Physics 460 F 2006 Lect 2a 3

From Last Time **Possible Two Dimensional Lattices**

General oblique Hexagonal $\Phi = 60^\circ, a_1 = a_2$
6-fold rotation, reflections

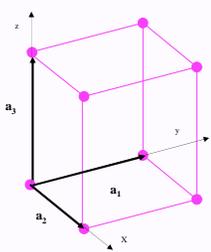

Square Rectangular Centered Rectangular
4-fold rot., reflect. 2-fold rot., reflect. 2-fold rot., reflect.

- These are the **only** possible special crystal types in two dimensions

Physics 460 F 2006 Lect 2a 4

Three Dimensional Lattices

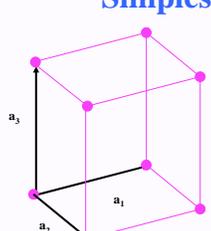

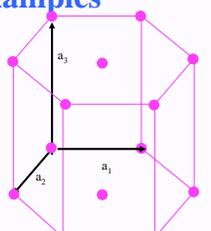

- Every point on the Bravais lattice is a multiple of 3 primitive lattice vectors

$$\mathbf{T}(n_1, n_2, n_3) = n_1 \mathbf{a}_1 + n_2 \mathbf{a}_2 + n_3 \mathbf{a}_3$$

where the n's are integers

Physics 460 F 2006 Lect 2a 5

Three Dimensional Lattices Simplest examples

Simple Orthorhombic Bravais Lattice Hexagonal Bravais Lattice

- Orthorhombic:** angles 90 degrees, 3 lengths different
- Tetragonal:** 2 lengths same
- Cubic:** 3 lengths same
- Hexagonal:** a_3 different from a_1, a_2 by symmetry

Physics 460 F 2006 Lect 2a 6

Lecture 2a - Structure of crystals - continued

Cubic Lattices

Length of each side - a

Simple Cubic

Primitive lattice vectors

$\mathbf{a}_1 = (1,0,0) a$
 $\mathbf{a}_2 = (0,1,0) a$
 $\mathbf{a}_3 = (0,0,1) a$

One atom per cell at position $(0,0,0)$

Body Centered Cubic (BCC)

Conventional Cell with 2 atoms at positions $(000), (1/2, 1/2, 1/2) a$

Physics 460 F 2006 Lect 2a

Cubic Lattices

Length of each side - a

Simple Cubic

Primitive lattice vectors

$\mathbf{a}_1 = (1,0,0) a$
 $\mathbf{a}_2 = (0,1,0) a$
 $\mathbf{a}_3 = (0,0,1) a$

One atom per cell at position $(0,0,0)$

Face Centered Cubic (FCC)

Conventional Cell with 4 atoms at positions $(000), (0, 1/2, 1/2), (1/2, 0, 1/2), (1/2, 1/2, 0) a$

Physics 460 F 2006 Lect 2a

Face Centered Cubic

Two views - Conventional Cubic Cell

Conventional Cell of Face Centered Cubic Lattice
4 times the volume of a primitive cell

Physics 460 F 2006 Lect 2a

Face Centered Cubic (fcc)

Also called cubic closed packed (ccp)

Each atom has 12 equal neighbors
We will see later that this is a "close packed" lattice

Physics 460 F 2006 Lect 2a

Face Centered Cubic

One Primitive Cell

Primitive lattice vectors

$\mathbf{a}_1 = (1/2, 1/2, 0) a$
 $\mathbf{a}_2 = (1/2, 0, 1/2) a$
 $\mathbf{a}_3 = (0, 1/2, 1/2) a$

One atom per cell at position $(0,0,0)$

Wigner-Seitz Cell

Physics 460 F 2006 Lect 2a

Body Centered Cubic

One Primitive Cell

Primitive lattice vectors

$\mathbf{a}_1 = (1/2, 1/2, -1/2) a$
 $\mathbf{a}_2 = (1/2, -1/2, 1/2) a$
 $\mathbf{a}_3 = (-1/2, 1/2, 1/2) a$

One atom per cell at position $(0,0,0)$

Wigner-Seitz Cell

Physics 460 F 2006 Lect 2a

Lecture 2a - Structure of crystals - continued

Lattice Planes - Index System

Plane through the points $s_1 a_1, s_2 a_2, s_3 a_3$
Each s can be an integer or a rational fraction

- Define the plane by the reciprocals $1/s_1, 1/s_2, 1/s_3$
- Reduce to three integers with same ratio h,k,l
- Plane is defined by (h,k,l)

Physics 460 F 2006 Lect 2a 13

Schematic illustrations of lattice planes Lines in 2d crystals

Lattice

Basis

- Infinite number of possible planes
- Can be through lattice points or between lattice points

Physics 460 F 2006 Lect 2a 14

Schematic illustrations of lattice planes Lines in 2d crystals

Lattice

Basis

- Equivalent parallel planes
- Low index planes: more dense, more widely spaced
- High index planes: less dense, more closely spaced

Physics 460 F 2006 Lect 2a 15

Schematic illustrations of lattice planes Lines in 2d crystals

Basis

- Planes "slice through" the basis of physical atoms

Physics 460 F 2006 Lect 2a 16

Lattice planes in cubic crystals

(100) and (110) planes in a cubic lattice
(illustrated for the fcc lattice)

Physics 460 F 2006 Lect 2a 17

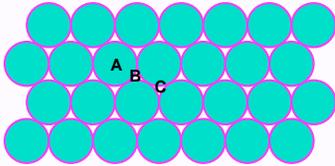

(111) lattice planes in cubic crystals

Face Centered Cubic Lattice
Lattice planes perpendicular to $[111]$ direction
Each plane is hexagonal close packed array of points

Physics 460 F 2006 Lect 2a 18

Lecture 2a - Structure of crystals - continued

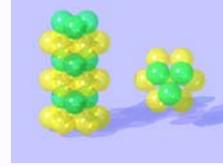

Stacking hexagonal 2d layers to make close packed 3-d crystal

- Each sphere has 12 equal neighbors
- 6 in plane, 3 above, 3 below
- Close packing for spheres
- Can stack each layer in one of two ways, B or C above A
- Also see figure in Kittel

Physics 460 F 2006 Lect 2a 19

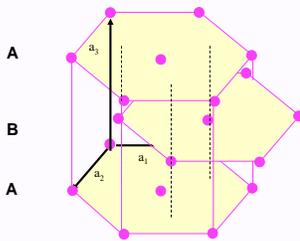

Stacking hexagonal 2d layers to make hexagonal close packed (hcp) 3-d crystal

- Each sphere has 12 equal neighbors
- Close packing for spheres
- See figure in Kittel for stacking sequence
- HCP is ABABAB..... Stacking
- Basis of 2 atoms

Physics 460 F 2006 Lect 2a 20

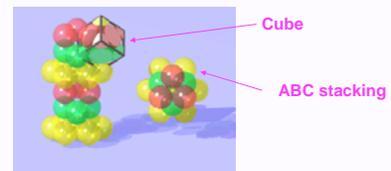

Hexagonal close packed

Hexagonal Bravais Lattice
Two atoms per cell

Physics 460 F 2006 Lect 2a 21

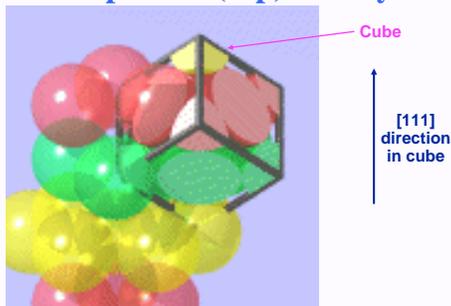

Stacking hexagonal 2d layers to make cubic close packed (ccp) 3-d crystal

- Each sphere has 12 equal neighbors
- Close packing for spheres
- See figure in Kittel for stacking sequence
- CCP is ABCABCABC..... Stacking
- Basis of 1 atom

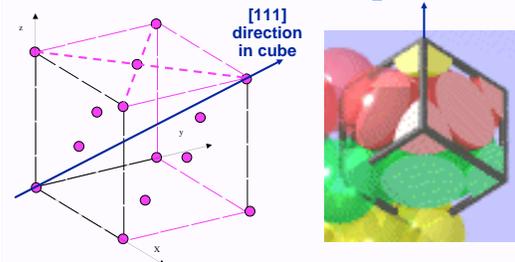

Physics 460 F 2006 Lect 2a 22

Stacking hexagonal 2d layers to make cubic close packed (ccp) 3-d crystal

Physics 460 F 2006 Lect 2a 23

Recall from before Face Centered Cubic (fcc) Also called cubic closed packed (ccp)

Each atom has 12 equal neighbors
The figure at the right shows the face centered character

Physics 460 F 2006 Lect 2a 24

Lecture 2a - Structure of crystals - continued

(111) planes in an fcc crystal

ABCABC... stacking of hexagonal planes \Rightarrow fcc crystal
fcc is a close packed crystal – cubic close packed - ccp

Physics 460 F 2006 Lect 2a 25

More on stacking hexagonal 2d layers

- Infinite number of ways to stack planes
- Polytypes occur in some metals, some compounds like silicon carbide (SiC)

Physics 460 F 2006 Lect 2a 26

Cubic crystals with a basis

NaCl Structure with Face Centered Cubic Bravais Lattice

ZnS Structure with Face Centered Cubic Bravais Lattice
C, Si, Ge form diamond structure with only one type of atom

Physics 460 F 2006 Lect 2a 27

NaCl Structure

NaCl Structure with Face Centered Cubic Bravais Lattice

Physics 460 F 2006 Lect 2a 28

CsCl Structure

CsCl Structure Simple Cubic Bravais Lattice

From <http://www.lpi.com/inorganic/structures/cscl/index.html>

Physics 460 F 2006 Lect 2a 29

Atomic planes in NaCl and ZnS crystals

(110) planes in NaCl crystal rows of the Na and Cl atoms

(110) plane in ZnS crystal zig-zag Zn-S chains of atoms

Physics 460 F 2006 Lect 2a 30

Lecture 2a - Structure of crystals - continued

(110) plane in diamond structure crystal

(100) plane in ZnS crystal
zig-zag Zn-S chains of atoms
(diamond if the two atoms are the same)

Calculated valence electron density
in a (110) plane in a Si crystal
(Cover of Physics Today, 1970)

Physics 460 F 2006 Lect 2a 31

(111) planes in ZnS crystals

[111] direction
in cube

C == Zn S
B == Zn S
A == Zn S
C == Zn S
B == Zn S
A == Zn S
CCP

(111) planes in cubic ZnS crystal

Note: ABAB... stacking gives hexagonal ZnS

Physics 460 F 2006 Lect 2a 32

Perovskite Structure ABO_3

Simple Cubic Bravais Lattice

A atoms have 12 O neighbors
B atoms have 6 closer O neighbors

Many compounds form the perovskite structure,
 $SrTiO_3$, $BaTiO_3$, $LaMnO_3$, ...

Physics 460 F 2006 Lect 2a 33

Symmetries of crystals in 3 dimensions

- All Crystals can be classified by:
 - 7 Crystal systems (triclinic, monoclinic, orthorhombic, tetragonal, cubic, hexagonal, trigonal)
 - 14 Bravais Lattices (primitive, face-centered or body-centered for each system – 14 of the 7x3 possibilities describe all Bravais lattices)
 - 32 Points groups (rotations, inversion, reflection)
- See references in Kittel Ch 1, G. Burns, "Solid State Physics"

Physics 460 F 2006 Lect 2a 34

Is a crystal really different from a liquid?

Liquid

Crystal

Yes – the crystal has "order" – different directions are different

Other crucial differences?

Yes – dislocations

Example of a dislocation
-a crystal with an extra plane of atoms on the left
- The dislocation can move but it cannot disappear!

Crystal with a "dislocation"

Important for deformations, ... See Kittel Ch. 20

Physics 460 F 2006 Lect 2a 35

Next Time

- Diffraction from crystals
- Reciprocal lattice
- Read Kittel Ch 2

Physics 460 F 2006 Lect 2a 36
