

## Proposal writing and evaluation (04.12.)

The evaluation is not depending on the PI and CoIs as well as on the amount of observing time asked for. It is purely depending on the content of the proposal.

Reading the proposal:

- Try to understand the scientific case without reading any further references
- Write down what is unclear
- What can be written in a shorter way?
- What needs to be better explained?
- Is the figure clear and well described?
- Is reason for the needed observation time well explained?
- What would you do better

Evaluating the proposal:

- Give a grade between 1 (excellent) and 5 (poor)
- Summarize the following three points with at least two sentences for each point
  1. Aims
  2. Strengths
  3. Weaknesses

We will then discuss all the points during the lecture.
